Exercise selection and learning journal. The colored lines show the current learning level of each exercise. A star means that all levels of the exercise have been solved perfectly.

Choice of difficulty level: The topic remains the same across all three levels, the difficulty increases.

Recognize orientation (level 2): Which lobsters are facing the same direction as the template?

Orientation in space (level 2): In, next to, under ... The illustrations are also funny occasions for talking about how and where.

LOGO playfully supports and encourages children aged 3 to 7 in the development and improvement of cognitive skills. The program prepares children for a successful entry into school. Those who master the 9 modules are well prepared to start with reading, writing and calculating.

Motivating learning in three stages Three levels of difficulty help the children to gently engage in a topic. At the entrance of every level, the children learn the process and requirements of an exercise in the most simple way. Success is guaranteed. This motivates them to tackle and master the challenge of the next two stages.

Always know where you stand The exercise menu continuously documents the learning level. The children always know which stages of the 9 exercises they have already worked on – and how successful they have been.

The modules 9 modules are planned in the **LOGO** series. Each module contains 9 exercises focused on an important topic.

Already implemented:

- – Colours and Shapes
- – Discover
- – Complete
- – Directions
- – Combine
- – Classify
- – Symmetries
- – Series

Designed:

LOGO 9 – Amounts

The basis for the development is the **LOGO** learning booklet series for the profaxli learning device. The basic ideas were further developed in order to exploit the additional possibilities of digital learning.

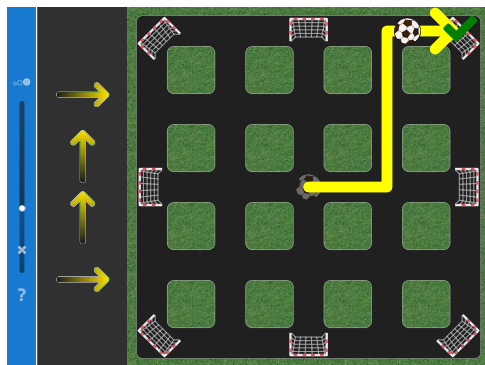

The development team

René Fehr-Biscioni – Developer, programmer, designer

Harriet Bünzli-Seiler – Primary school teacher, author of teaching materials
